

WashU Epigenome Browser - Bug # 111

Status:	New	Priority:	Normal
Author:	Rebecca Lowdon	Category:	
Created:	11/21/2013	Assignee:	
Updated:	11/24/2013	Due date:	
Subject:	Tracks disappear when using config panel		
Description			
<p>Tried adding three new tracks via Facet browser from my data hub. When I load them they appear with a huge track height and no data. When I go to change the track height, the tracks disappear completely (but are still listed as "shown" in the facet browser).</p> <p>I checked my datahub, there was no parameter for "fixedscale" originally. I've added that parameter now, but I still get the problem even after refreshing cache (maybe cache refresh doesn't check those parameters?)</p> <p>Session ID: L607cgtol3 ..."all nonSE LMR" version</p> <p>Then add three tracks -- first image.</p> <p>Result looks like second image.</p>

Sorry I just figured out the trouble. You must have used this in declaring the track in your hub:

height:"20",

The browser was expecting the height value to be integer but "20" is a string so it took the string without conversion.

The string form height value is now stored in session so there's no way to fix it.. could you please make a new session? Sorry about the trouble!
