**Subject:** Tracks disappear when using config panel

### Description

Tried adding three new tracks via Facet browser from my data hub. When I load them they appear with a huge track height and no data. When I go to change the track height, the tracks disappear completely (but are still listed as "shown" in the facet browser).

I checked my datahub, there was no parameter for "fixedscale" originally. I've added that parameter now, but I still get the problem even after refreshing cache (maybe cache refresh doesn't check those parameters?)

Session ID: L607cgtol3 ... "all nonSE LMR" version

Then add three tracks -- first image.

Result looks like second image.

Sorry I just figured out the trouble. You must have used this in declaring the track in your hub:

```
height:"20",
```

The browser was expecting the height value to be integer but "20" is a string so it took the string without conversion.

The string form height value is now stored in session so there's no way to fix it.. could you please make a new session? Sorry about the trouble!
