WashU Epigenome Browser - Bug # 115

Status:	New	**Priority:**	Normal
Author:	Rebecca Lowdon	**Category:**	
Created:	11/23/2013	**Assignee:**	Xin Zhou
Updated:	11/23/2013	**Due date:**	
Subject:	tracks do not relocate and some disappear in GSV		

Description

Loaded my browser session ID: L607cgtoI3
Then loaded attached regions into GSV via copy-paste.
Adjust to view "gene body" +/-2kb, then toggle gene set view function.
The result is attached png. The chromosome ideogram changes, but the actual tracks do not. Notice the gene track is still over the Hox cluster. Additionally, half of the tracks do not display any data.

History

#1 - 11/23/2013 04:19 pm - Rebecca Lowdon
- File Screen Shot 2013-11-23 at 4.18.47 PM.png added

When I load a new browser session (not from a saved session ID, but start over completely), then load the gene list, turn on GSV, everything works fine.
Maybe there is some conflict with my earlier browser session and GSV?
