**Subject:** Include scaffolds on genome snapshot

### Description

Would be nice to view scaffolds and unassigned chromosome fragments (in danRer7 referred to as "NA###") in the "genome snapshot" app. Maybe make it an optional feature -- generate the "standard" genome snapshot like you do now, but have a button to generate additional snapshot over the scaffolds and unassigned chromosome fragments (most interested in scaffolds at this point).

You can get to these fragments by search, but sometimes it's nice to relocate from the genome snapshot view, especially if you don't already know the locus your are looking for on a scaffold.

Thanks!!
