<b>Subject:</b>	IMR90 cell line incorrectly classified		
<b>Description</b>			
I think the IMR90 cell line should not be classified as an ES/iPS-derived cell. It is a primary cell culture: <a href="http://www.atcc.org/Products/All/CCL-186.aspx">http://www.atcc.org/Products/All/CCL-186.aspx</a>			
The Roadmap data page classifies it as a fetal lung cell type. This seems more appropriate (similar to how you characterize NHEKs).			

### History

#### #1 - 10/06/2014 11:39 pm - Daofeng Li

Thank you very much Rebecca.

I have moved this term to "Fetal Cells/Tissues -> Fetal Lung".

#### #2 - 10/14/2014 02:11 pm - Rebecca Lowdon

- Status changed from New to Closed
