Subject:	Improve gene set view		

Description

(comments from Gormley, Matthew at UCSF)

- Would be nice to have a gene set view toolbar, including buttons for:

  "Undo", as in, I click on a gene name to zoom in, now I want to zoom back out to where I was

  "Fit within view", as in, I want all my genes in a gene set view to be visible at once with one click

  ***Ability to draw box around horizontal list of genes in gene set view is nice, would be easier to recognize if mouse becomes a double headed arrow when near, or if the blue box has visually obvious control handles at the sides**

  *when editing a gene set, wanted to remove an item, clicked on "x" to remove, it did not (but the row did turn dark after I clicked on it)

  ***nice to have interactive gene set lists--merge, exclude, etc (like creating an interactive venn diagram)**

  *in gene set view it is nice that you altered the color of the gene columns (brown, white, brown..) down through the Refseq gene track
