Subject:	"file type" category for custom facet table		
Description			
when a custom datahub or publichub is loaded, its inner metadata will be rendered into a facet table			
it's also desirable to see hub tracks grouped by "file types" (bigwig, bam, bedgraph...)			
need to automatically append a "file type" attribute to custom metadata vocabulary when it's loaded

Implemented in v24.1

A "File type" attribute is automatically added to metadata that's either loaded from hub or from embed.

On metadata colormap, you can choose to add File type term. In the facet table, the "File type" term can be used to show how many tracks are there for each type.
